

# Back to Profitability – retroFIT your Biodiesel Plant

## What are the missing pieces to bring your smile back?

### BioDiesel Quality

Does ALL your Biodiesel production meet ASTM D6751 / EN 14214 standards or are there any negative impacts on yield, capacity and feedstock flexibility?

### 100% Yield

Is your plant able to convert 100% of the feedstock or are you losing valuable Triglycerides and FFAs?

### Nameplate Capacity

Do you reach the capacity you paid for or are you not getting the full potential from your investment?

### Feedstock Flexibility

Do you need highly refined and expensive vegetable oil or can your plant deal partially or even exclusively with cheaper high FFA feedstock like Trap/Brown Grease, Yellow Grease/Used Cooking Oil, Tallow/Animal Fat, PFAD?

### Saleable By-Products or Waste

Does your plant produce waste (filter material, soap stock, etc.) or can you earn maximum additional income e.g. with high quality Glycerine?

### Plant Safety

Is your plant meeting the latest safety standards and regulations?

**If one or more of the above applies to your plant, we can help you smile again!**
