

Training Process engineering and R&D Analysis on operator level

Duration: approx. four days at BDI based on laboratory and production manager level
approx. five to eight days on site based on operator level

BDI After-Sales our service - your success

your benefits:

- Creation of mutual understanding: production - laboratory
- Early detection of variables influencing quality assurance and production increase
- Avoidance of factors impairing quality and production
- Optimization of auxiliary material quantities

our achievements:

- Discussion of feedstock specifications
- Explanation of influences of feedstock parameters on Biodiesel process
- Explanation and analysis of individual processes steps
- Explanation of Biodiesel analysis values for process-determining parameters
- Review of sampling plan for process monitoring
- Training of analysis methods in process
- Process simulation on laboratory scale

our demands:

- Availability of defined feedstock quantity
- Disclosure of process parameters
- Disclosure of current operating data
- Functional laboratory equipment
- Access to plant and ancillary utilities
- Access to laboratories
- Access to PCS, batch protocols and analytical results
- Availability of qualified personnel
- Contact person for duration of training
- Workplace with internet access
- Training-room
- Duty schedule of course participants incl. job description
